

Kids' Foot Size Chart

Kids grow very fast and to pick right fit with growing room and comfort is very important. Please print this chart on 8.5"x11"/Letter size paper at 100% (full size without zooming).

Find the right size

1. Fold bottom part on marked line
2. Place folded part against the wall
3. Place child's heel against the wall
4. Make sure child stands on the foot being measured and all toes are relaxed
5. Read size at the end of child's longest toe.
If toe lies between the lines, then take the next size
6. Since one foot is often shorter than the other one, make sure you measure both feet
7. Take the size of largest foot

Please place a credit card here. If it matches this box, then chart was printed correctly
